

Text, Voice and Video Messenger

About Voxbras:

Voxbras is a VOIP and messaging app for iOS and Android platforms with the whole infrastructure support. Telex allows to send instant text messages, files, make voice (to regular or cellular network) and video calls, import contacts and manage content gallery. This app was in top 5 paid apps in Google Market for 2 weeks.

The Challenge:

- provide coherent communication between two platforms;
- Provide the whole infrastructure support in a short time frame;
- Establish well-coordinated effective interaction with the stakeholders located on different continents.

Company's role

ITRex Group was supposed to develop iOS and Android apps within 3 months. Throughout the development cycle our team followed principles of Agile methodology with one-week sprints. This methodology and on-site presence allowed to maintain effective communication with the client meeting all the requirements and provided deadline.

Results:

- Developed iOS and Android app versions within a short period of time;
- Provided coherent communication between two platforms;
- Achieved aligned teamwork and effective cooperation with the client.

Solutions:

- Full Business Analysis and project management;
- Full cycle of Mobile development and QA;
- Infrastructure design and monitoring;
- Backend services implementation for contact synchronization, content managing, authorisation;
- Using of SIP and XMPP Protocol for transferring instant messages.
